

Design Guidelines - Role

- Implement a city's downtown plan; without a plan in place, guidelines are ineffective.
- Encourage creativity and flexibility through descriptive rather than prescriptive guidelines. Descriptive guidelines:
 - 1) promote what fits and
 - 2) discourages what is disruptive

Design Guidelines - Role

- Implement a city's downtown plan; without a plan in place, guidelines are ineffective.
- Encourage creativity and flexibility through descriptive rather than prescriptive guidelines. Descriptive guidelines:
 - 1) promote what fits and
 - 2) discourages what is disruptive

Design Guidelines

- Give developers and architects an understanding of city's/ community's expectations.
- Give the city a framework for reviewing proposed projects.
- Protect the investment environment.
- Foster a city's unique character and promote quality and innovation.

Why Do We Need Design Guidelines?

Guidelines give developers and citizens an understanding of the city's expectations and provide consistent criteria by which to review proposed projects. They ensure a degree of order, harmony and quality within the built environment, so that individual buildings and projects succeed on their own, yet also contribute to a unified and distinct downtown Lincoln district.

Role of Design Guidelines

Lincoln's Design Guidelines support and complement the Lincoln Downtown Master Plan. The Design Guidelines help bring to life the land use and public realm framework of that plan, which was developed according to the goals and objectives of Lincoln citizens and city staff. Thus the Design Guidelines reflect the values and desires of the Lincoln community.

The Design Guidelines also offer designers a flexible tool for quality and innovation. Guidelines do not prescribe specific design solutions or make rigid requirements. Indeed, there will always be many ways of meeting a particular guideline. The guidelines are a descriptive template for maintaining and improving the urban character of downtown without dictating or prescribing a specific style or theme.

Moreover, the guidelines reinforce the "urban fabric" of downtown Lincoln, where buildings are built edge-to-edge and engage the streets. And they encourage new development and renovation that complements and respects Lincoln's existing historic downtown character.

Design Review Process

All new building and exterior renovation projects within the Downtown Master Plan area are subject to design review - that is, whenever a building permit is required, the project will also go through some version of the design review process illustrated in the diagram below.

The exact steps of the review process followed is generally based on the extent of exterior work proposed, with more extensive projects typically reviewed by a Design Commission and less extensive projects by planning staff.

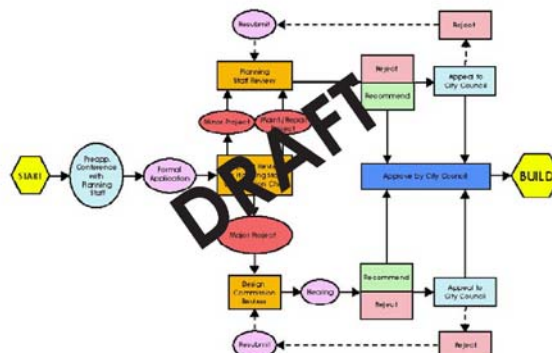

- Major Modification - Design Commission review

Starting at a "pre-application" conference with planning staff, the design guidelines checklist is used to determine which (if any) guidelines apply to the project.

Once the formal application is submitted, a decision is made to approve, to approve with conditions, or to deny a proposal. For instance, when a project is found to be not consistent with the design guidelines, specific conditions of approval may be imposed, or it may be decided that design details or other site factors warrant finding for approval of the project without meeting the particular design guidelines.

For those applications that are substantially inconsistent with the guidelines, staff or the a Design Commission also have the option to deny the development request.

The Design Review process takes into account only whether the project complies with the applicable design guidelines. A project's consistency with the Master Plan or any other relevant documents is determined separately by the planning commission and planning department staff.

Character Guidelines

Intent

The Character Guidelines address the qualities that give Lincoln its uniqueness and personality. They consider what makes downtown a special, distinct "place," not simply a group of individual buildings and streets.

Downtown Lincoln began as the small village of Lancaster - a few log cabins located near a salt basin in the 1850s, when salt was a precious commodity and the Nebraska Territory was new.

Changes in the 1860s made lasting marks on the Lincoln of today: statehood came in 1867, and the village became the state capital under a new name, Lincoln. It was platted with the wide streets we see today, as well as ample space for the then yet-to-be state university campus.

By 1870, regional agriculture had spawned an open-air Market Square in what is now the Haymarket Landmark District; the first train rolled through town that same year, and the pioneer city grew into a rail center throughout the latter decades of the Nineteenth Century.

Lincoln ca. 1920

Elements

These guidelines are divided into the following elements:

- Reinforce Lincoln's Sense of Place
- Preserve Historic Buildings
- Promote Linkages to Lincoln's Heritage
- Establish or Strengthen Gateways
- Promote Architectural Compatibility
- Integrate the Environment
- Integrate Art

Reinforce Lincoln's Sense of Place

Guideline

Strengthen the qualities and characteristics that reflect downtown Lincoln's history, geography, climate and people.

Description

Downtown Lincoln has long been the heart of the southeastern Nebraska region and embraced its role as the area's most desirable destination in which to work, live, study and play.

The street grid of the original town plat, dating from the 1860s, emphasized the prominence of downtown Lincoln as state capital and center of the Salt Basin. And it is appropriate that the mid-rise buildings of today's downtown are significant not as single structures but rather as a collection of well-constructed buildings that give prominence to a signature building, the monumental state capitol.

The original plat of Lincoln also laid out a minimum 100-foot wide right-of-way for the typical downtown street, providing ample room for activities and landscaping. These wide streets invite into the downtown urban grid the lush colors and textures of the surrounding neighborhoods, farmlands, and university campus.

Appropriate

- Background buildings whose identity comes from contributing positively to the downtown as a whole.
- Quality, long-lasting, durable materials appropriate to Lincoln's climate.
- Development of downtown cultural facilities celebrating Lincoln's history.
- Preservation and renovation of buildings and sites significant to Lincoln's heritage.

Inappropriate

- Historic "theme-park" development not authentic or specific to downtown Lincoln's heritage.
- Design that is corporate-brand-inspired.
- Generic development that could be anywhere – such as what one might see at a typical shopping center.
- Signature buildings that visually compete with the capitol or other Lincoln landmarks.

Appropriate

Promote Architectural Compatibility

Guideline

New buildings should be "good neighbors" and contribute to the quality and character of their architectural context.

Description

Buildings should "fit" with their architectural surroundings – relating to nearby buildings rather than calling attention to themselves through disruptive design excesses or novel variations. Material, color, texture, scale, form, silhouette, height, rhythm and proportion all influence a structure's compatibility with its surroundings. Architectural elements should enhance not detract from the area's overall character.

Appropriate

- Traditional architectural elements (for example, classical cornice) used at a scale and level of detailing proportionate to the size of the building.
- Form, proportions, rhythms, materials, colors and architectural motifs that are suggested by and complement adjacent buildings.

Inappropriate

- Out-of-scale, over-simplified, cartoon-like cornices or other traditional architectural elements applied without regard to size or use of the element.
- Building elements that do not respect the scale, materials, proportions and heights of adjacent historic or significantly high-quality buildings.

Appropriate

Inappropriate

Preserve Historic Buildings

Guideline

Renovation, restoration and addition to historic buildings in Lincoln should respect the original structure.

Description

Architectural elements of individual historic buildings add to the atmosphere and uniqueness of the downtown as a whole. Older buildings should be preserved in their entirety when beneficial. If complete preservation is not possible, a sensitive and viable compromise in rehabilitation and reuse should be made that retains the building's historic character.

Financial incentives at local, state and federal levels recognize the merits of historic reuse and can add to the financial viability of preservation and renovation.

Appropriate

- Retain significant original characteristics of scale, massing and building materials of historic buildings, particularly along their street facades.
- Additions to buildings should neither deform nor detract from the composition of the facade or be out of scale with the building.
- Distinctive stylistic features or examples of skilled craftsmanship should be treated with sensitivity. All buildings should be respected as products of their time.

Inappropriate

- Incompatible additions or building alterations using contemporary materials, forms or colors on building facades.

Appropriate

Appropriate

Integrate Art

Guideline

Public art should complement the character of a site, building or downtown as a whole. When used, public art should be integrated into the design of the building or public open space.

Description

Large scale public art pieces bring focus to an outdoor space while small scale pieces can bring detail and delight to the ground floor of a building or low wall. At any scale, art should not overwhelm outdoor spaces or render buildings mere backdrops. Three dimensional sculpture, murals or other art forms are appropriate only when well-designed.

If well-executed, surface art work painted or attached to a large blank wall can add interest, whimsy and spice. Sometimes murals created as community art projects can be poorly executed, easily damaged and compete with buildings and the streetscape. To be deemed appropriate, art work should be permanent and designed to age well.

Appropriate

- Artwork designed specifically for and integrated into the building or site.
- Professionally designed.
- Durable, low-maintenance materials that are vandal-resistant.

Inappropriate

- Amateur art projects.
- Artwork used as advertising.
- Subjects and themes that may offend, incite or embarrass the community or individuals of Lincoln.
- Display conditions that detract from the artwork.

Appropriate

Pedestrian Emphasis Guidelines

Define the Pedestrian Environment

Guideline

A building should provide a continuous, visually rich pedestrian experience along its ground floor street front.

Description

The most important part of a building is its ground floor – the lowest 15 feet of the facade, which a person experiences walking past or entering the building. This “pedestrian experience zone” should extend horizontally across the sidewalk and provide an enclosed, continuous and comfortable street edge for the pedestrian. Building transparency at ground floor should foster interaction between the public and private realms.

Appropriate

- Windows - transparent or with displays at street level.
- Walls that create visual interest by providing a variety of forms, colors and compatible cladding materials.
- Facades that provide a rhythm by using bays, columns, pilasters or other articulation at street level.
- Signs and lighting at ground level that fit to the human scale.

Inappropriate

- Blank, flat, nondescript walls not articulated by any visual interest or detail at street level.

Appropriate

Protect the Pedestrian From the Elements

Guideline

Provide pedestrians with protection from wind, sun, rain, sleet and snow.

Description

Awnings and canopies are encouraged along the ground floor of buildings to protect pedestrians from rain and snow during inclement weather and provide shade in summer.

The design of awnings and canopies should be an integral component of the building facade. Awnings should be in proportion to the building and sidewalks, and not so large as to impact street trees, light fixtures or other street furniture.

Appropriate

- Canopies fixed or retractable awnings.
- Horizontal metal canopies, especially if transom or clerestory windows are above storefront glazing.

Inappropriate

- Vinyl or other synthetic fabrics.
- Baskit awnings.
- Oversized advertising or tenant signs on awnings.
- Oddly-shaped forms.

Appropriate

Create Successful Outdoor Spaces

Guideline

Gathering spaces should be designed for a variety of activities during all hours and seasons.

Description

Outdoor gathering spaces should be inviting and maximize opportunities for use. They should be spatially well-defined, friendly, accommodating, secure, easy to maintain - and "alive," whether intimate and quiet or active and boisterous. All areas should work well for pedestrians and provide space for special events as well as passive activities.

Appropriate

- Courtyards, squares, forecourts and plazas with active adjacent ground-floor uses.
- Buildings surrounding green spaces to give the space visual definition and provide it with the vitality of active ground-floor uses.
- Trees, shrubs, and plants to help define walkways, create appropriate transitions from park to street and provide visual interest.
- Structures, pavilions and seating areas that are easily accessible, secure and safe-feeling during day and evening hours.
- Greenways or pedestrian walkways and courtyards in residential or office development areas. If used, front doors should engage these spaces.
- Rooftops should be considered for garden terraces.
- Balconies and projecting bays.

Inappropriate

- Pocket paths, forecourts and plazas without active enclosing uses along
- "Leftover" green spaces, busy streets, parking lots or other adjacent unsuitable areas.

Appropriate

Integrate Universal Design

Guideline

Accommodate accessibility for persons with disabilities in a manner that is integral to the design of the building and public right-of-way.

Description

On existing buildings and sites, all ramps, lifts and elevators should be designed to be graceful and natural parts of a project, rather than simply a means of meeting the requirements in an awkward or minimal manner. On new buildings and sites, all entrances should be designed to minimize or eliminate the need for ramps, lifts or elevators for persons with disabilities.

Appropriate

- Ramps to existing building entrances that provide direct access but are screened and/or integrated into the stairway design.
 - Ramps constructed of similar or compatible materials as the building, stairs and walkways.
- Other universal design features such as:
- Handrails at all exterior stairs.
 - Detectable warnings at top step of all exterior stairs.
 - Accessible parking near entrances to buildings.
 - Entry doors that do not open out onto the sidewalk.
 - Entry doors that have sufficient space at their latch side to allow a person in a wheelchair to independently open the door.

Inappropriate

- Ramps that obstruct or limit pedestrian access from stairs or walkways.
- Ramps that do not provide safe and

Appropriate

Inappropriate

Architecture Guidelines

Encourage Retail Corner Doors

Guideline

Locate entry doors on corners of retail buildings whenever possible.

Description

Corner entries reinforce intersections as important places for pedestrian interaction and activity. Transparent doors and windows are strongly encouraged. Entries at 45 degree angles and free of visual obstructions are also encouraged.

Appropriate

- Doors with large glass areas.
- Primary building entrance should be at corners.
- Doors combined with roof or facade architectural elements such as bays or towers.
- Building wall lighting emphasizing entrance.

Inappropriate

- Blank walls at corners of public streets.
- Visual and physical obstructions such as large columns.
- Primary entry doors made of clear anodized aluminum.
- Primary entry doors that are solid and windowless.
- Utility boxes, meters or mechanical units near the entrance door.
- Glass areas with simulated divisions (internal or applied synthetic materials).
- Reflective, opaque or tinted glazing in the door.

Appropriate

Inappropriate

Encourage Inviting Ground Floor Retail Windows

Guideline

Use windows that draw customers into stores, shops and restaurants.

Description

Retail and commercial uses should use windows that add activity and variety at the street level, inviting pedestrians in and providing views both in and out.

Transparency beckons people inside – whether a shop, gallery, restaurant or office. Restaurants and cafes benefit from windows that open allowing passersby to see, hear and smell the activity within. Views into stores should not be blocked.

Appropriate

- Windows that open by pivoting, sliding or shuttering.
- Painted wood panels or tile clad panels below windows.
- Transom Windows

Inappropriate

- Clear or light bronze anodized aluminum windows.
- White painted aluminum framed windows.
- Residential-styled bays, multi-paned divided lites, half-round or other similar forms.
- Small scale windows

Appropriate

Inappropriate

Use Quality Wall Materials

Guideline

Use materials that create a sense of permanence.

Description

Quality wall materials can provide a sense of permanence and bring life and warmth to downtown. Articulation of wall materials should be bold, using materials that show depth, quality and durability. It should be apparent that the materials have substance and mass, and are not artificial, thin "stage sets" applied only to the building's surface.

Appropriate

- Boldly articulated window and storefront trim.
- Natural or subdued building colors.
- Limited use of bright accent trim colors.
- Varied yet compatible cladding materials.
- Masonry materials – brick and stone or terra

Appropriate

Inappropriate

Create Attractive Building Silhouettes and Roof Lines

Guideline

Create interesting and detailed roof lines and silhouettes.

Description

Building roof lines should enliven the pedestrian experience and provide visual interest with details that create forms and shadows. A building's silhouette should be compatible with those of other buildings along the existing streetscape.

In some cases, it may be appropriate to mark an entryway with a distinct form, such as a tower, to emphasize the significance of the building entry.

For residential buildings, roof massing should be simple yet detailed and articulated. For example, flat roofs may be appropriate if they have a cornice designed with depth and detail expressing the top of the building wall. Dormers set into sloped roofs may be appropriate. These forms provide visual interest and bring additional living space, light and ventilation to upper floor and attic spaces.

Appropriate

- Dormer windows.
- Towers or similar vertical architectural expressions of important building functions such as entries.
- Varied roof line heights.
- If cornices are used they should be well detailed. They should have significant proportions (height and depth) that create visual interest and shadow lines.

Inappropriate

- Unarticulated roof lines.
- Poorly detailed decorative roof forms.

Appropriate

Inappropriate

Provide Interesting Building Massing

Guideline

Use scale-defining devices to break up the longitudinal dimensions of buildings, creating a comfortable scene of enclosure by establishing an uninterrupted street edge.

Description

The length and breadth of a building should be friendly in scale and inviting to the pedestrian. Portions of a large building mass should be broken into smaller, appropriately scaled modules, with changes in plane indicated by bold projections and indentations. This allows an overly large building to appear as smaller, side-by-side buildings. Vertical and horizontal elements should be used to create a human scale and form a coherent pattern providing visual interest to the pedestrian.

Appropriate

- Break down long expanses of building frontage both horizontally and vertically.
- Tripartite facade division – base, middle and top for taller buildings (over three stories).
- Terrace back upper levels.
- Vertical articulation of windows, columns and bays.

Inappropriate

- Long unbroken volume along street facade.
- Smooth, undifferentiated facade.
- Suburban-styled horizontal orientation of building elements – walls, doors and windows.

Appropriate

Appropriate

Promote Green Architecture

Guideline

Use sustainable design practices whenever possible as long as they do not detract from the pedestrian activity and economic viability of downtown.

Description

Address the health of downtown in a holistic manner, considering environmental quality and long-term benefits to downtown activity and vitality. Guidelines and direction from official environmental certification programs such as LEED (Leadership in Energy and Environmental Design) may be helpful in determining sustainable practices.

Appropriate

- Consider how all of a building's systems work with each other and with the building envelope to maximize efficiency.
- Use highly durable local materials.
- Follow a maintenance strategy to run building systems at maximum efficiency over the long term.

Inappropriate

- "Green" practices that detract from high-quality design.
- Application of "green" design for marketing hype alone.
- Application of "green" design water quality enhancement projects (swales) that erode the urban character of downtown.

Appropriate Green Roof

Build Compatible Parking Structures

Guideline

Parking structures should be designed so that they are consistent in form, massing and materials with most other buildings in the downtown.

Description

Parking garages play an important role in the success of any downtown. However, too often they are incompatible with nearby buildings because they are designed for parking function without consideration of architectural quality.

Frequently the dominant architectural features of the garage are multiple layers of long, dark, horizontal ventilation openings and concrete structure at each parking level.

Parking garages should instead be designed to appear like any other occupied building in the downtown. To achieve this, their horizontal form must be broken down – for instance, adding more wall surface while reducing openings, providing adequate ventilation through a series of stacked, punched openings rather than the long horizontal gaps, and using detailing at corners or on window trim. Active retail uses on the ground floor also help garages fit in with the rest of downtown.

Appropriate

- Ground-floor retail or other active uses.
- Small openings that may be glazed to function as windows.
- Glass-enclosed elevators along the building edge.
- Stairways, elevators and parking entries and exits that occur preferably at mid-block but never at corners of retail streets.
- Single auto entry/exit control point to minimize driveways.
- Vertical expression of building.

Inappropriate

- Parked cars on the ground-floor that are visible from adjacent sidewalks.
- Exposed sloped floors visible from the street.
- Stairways, elevators and parking entries and exits occurring at the building's corners, where retail is a more appropriate use.
- Horizontal expression of building structure.

Appropriate

Inappropriate

Use Skybridges Sparingly

Guideline

All-weather upper floor connections between structures across public rights-of-way should be limited.

Description

While skybridges can create comfortable connections between buildings, they can greatly contribute to the loss of street activity and may have social implications of stratifying and separating citizens by income or ethnicity. Furthermore, they signal that streets are inhospitable and should be avoided. When used, skybridges should be transparent and subordinate visually to adjacent buildings.

Appropriate

- Connecting hospital buildings, jails and courthouses or similar building types where public safety and security concerns warrant separation of users.
- Connecting convention centres with headquarters hotels, when at-grade connections are not feasible.
- Construction at third floor or higher.
- Minimum width and height of structure relative to adjacent street and buildings.
- Glass window walls for transparency in and out.

Inappropriate

- Connecting office, retail, housing, educational or government uses.
- "Signature" architectural design elements – forms or features that call out for attention.

Appropriate

Lighting Guidelines

Orient Lighting to the Pedestrian

Guideline

Lighting should be used to highlight sidewalks, street trees and other features, and harmonize with other visual elements in the greater downtown.

Description

Street lighting should be provided on all public streets, sidewalks, pedestrian walkways and public open spaces. Lights may also be used to highlight trees and similar features within public and private plazas, courtyards, walkways and other similar outdoor areas at night to create an inviting and safe ambience.

Appropriate

- Street lights of historical design.
- Pole standards black or dark green in color.
- Standards accommodating banners and hanging flower pots (potentially including automatic drip irrigation for pots).
- Footlighting that illuminates walkways and stairs.
- Fixtures concealed and integrated into the design of buildings or landscape walls and stairways.
- Bollard lighting that is directed downward toward walking surfaces.
- Seasonal string lights on buildings and trees.

Inappropriate

- Flashing or colored lights.
- Exposed cords, outlets or other electrical devices that may provide safety hazards and are unsightly.
- Contemporary fixtures or over scaled, utilitarian fixtures such as "cobra-head" lights.
- Concrete light fixture bases taller than eight inches.
- Ornamental or contemporary light

Appropriate

Inappropriate

Integrate Building Lighting

Guideline

Exterior lighting of buildings should be an integral component of the facade composition.

Description

Architectural lighting may be used to articulate the particular building design. Lighting of cornices, uplighting and other effects may be used.

Lighting should not cast glare into residential units or onto adjacent lots or streets in any way that decreases the safety of pedestrians and vehicles.

Lights may, however, be used to create effects of shadow, relief and outline that add visual interest and highlight aspects of the building.

Appropriate

- Wall-washing lighting fixtures.
- Decorative wall sconce and similar architectural lighting fixtures.
- Screened uplight fixtures on buildings or integrated with landscape.
- Lighting that provides natural color.

Inappropriate

- Neon silhouette accent lighting.
- Bulb or flashing lighting.
- Fluorescent tube lighting.
- Security spotlight.
- Low pressure sodium lamps.

Appropriate

Inappropriate

Sign Guidelines

Consider Size and Placement of Wall Signs

Guideline

Signs should be sized and placed so that they are compatible with the building's architectural design.

Description

Signs should not overwhelm the building or its special architectural features. Signs should not render the building a mere backdrop for advertising or building identification.

Appropriate

- Signs should be incorporated into the building architecture as embossing, low relief casting or application to wall surfaces.
- Signs should be constructed of individual, three-dimensional letters, as opposed to one single box with cutout flat letters.
- Signs may be painted or made with applied metal lettering and graphics.
- Signs should be durable and long lasting.
- Signs may incorporate lighting as part of their design.
- Signs should be located above storefronts, on columns or on walls flanking doorways.

Inappropriate

- The material, size and shape of signs that overwhelm, contrast greatly or adversely impact the architectural quality of the building.
- Roof-mounted signs.
- Backlit signs.
- LED animated signs.
- Video signs.
- Painted window signs.

Appropriate

Inappropriate

Orient Hanging Signs to the Pedestrian

Guideline

Hanging signs should be oriented to the pedestrian and highly visible from the sidewalk.

Description

Signs should not overwhelm the streetscape. They should be compatible with and complement the building's architecture, including its awnings, canopies, lighting and street furniture.

Appropriate

- Required sign lighting should be integrated into the facade of the building.
- Signs should be constructed of high-quality materials and finishes.
- Signs should be attached to the building in a durable fashion.

Inappropriate

- Signs interfering with sight lines, creating a safety hazard or obstructing views.
- Roof-mounted signs.

Appropriate
